

Interim Report Feedback

Complexity of Proposed Project

- The project idea is suitable for FYP and sufficiently complex however it has not been investigated in a lot of detail. Some related work was identified and discussed.
- Ambition of project liked – complex enough to satisfy learning outcomes of the FYP.
- Need more clarity about what it is you're going to do.
- Rather than "compare multiple factors such as difficulty, complexity etc.", expand on the "etc." and tell me exactly the things you're going to compare
- Who are your users? Define.
- More references when you make assertions.

Quality and Detail of Requirements Analysis and Background Research

- Requirements do not sound correct they are written in a way that is more like methodology.
- This is not a software development project, so it does not have functional and non-functional requirements.
- Other expectations should've been highlighted.
- Requirements analysis doesn't match introduction.
- E.g. introduction mentions insecure APIs however no mention testing APIs in your requirements; possibly too ambitious anyway.
- Could address that mismatch with a bit of thought.

Quality of Professional Issues and Ethical Considerations

- Several useful issues are highlighted and discussed.
- Ethical procedures around each of the cloud platforms are not investigated

Quality of Presentation, Structure, English

- Very good presentation
- English not quite of the standard necessary if your FYP is to achieve a good mark.
- Use a tool like Grammarly
- Use of pronouns should be "I" and "my"
- Instead of using "pen testing", it should be "penetration testing"
- Pay attention to the small details
